DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Information Disclosure Statement

2. The prior art documents submitted by the applicant in the Information Disclosure Statement filed on July 18, 2006 have all been considered and made of record (note the attached copy of form PTO-1449).

Claim Objections

3. Claims 1 and 5 are objected to because of the following informalities: "the fiber" lacks proper antecedent basis. The fiber cloth, previously recited, does not appear to have an inherent axis as presently recited. Furthermore, a fiber cloth typically comprises a weave of fibers running along perpendicular or multiple directions/axes. Therefore, it is unclear as to what axis the applicant is referring. Appropriate correction is required.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. **Claims 1-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ikeda (JP 2001-133761 cited by Applicant) in view of Igawa et al. (JP 54-148548).**

6. Ikeda discloses a liquid crystal display apparatus wherein a liquid crystal driving electrode is formed on at least one of a pair of substrates opposing to each other and liquid crystal is encapsulated in a space formed with a distance between said substrates which is kept by a spacer provided between said substrates, characterized in that at least one of said pair of substrates is a resin substrate which contains a fiber cloth. Ikeda does not expressly disclose that a polarizing plate is provide on the outer side of at least one of said pair of substrates the axis of the fibers and that an axis of the fiber and an optical axis of said polarizing plate are coaxial with each other.

7. Igawa et al. discloses the desirability of aligning substrates having directivity by aligning an axis to be coaxial with an optical axis of the polarizing plate in order to improve the appearance of the LCD panel. Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to align the fiber axis of Ikeda with the optical axis of the polarizer as taught by Igawa et al. in order to improve the display properties.

8. The method claims are rendered obvious as setting forth requisite steps for manufacture of the display apparatus.

Conclusion

9. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. US 7,378,137 and US 2006/0154041 are cited as being relevant art.

10. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out

the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).
